OVERVIEW

Senior QA Automation Engineer with 10+ years of software quality assurance experience, including 7+ years specializing in test automation. Experienced in designing, developing, and maintaining scalable automation frameworks from scratch using Java, JavaScript, and Python, with Selenium and Playwright.

Strong background in UI automation, API testing, and integration testing. Hands-on experience in performance testing and integrating automated test suites into CI/CD pipelines using Jenkins and GitHub Actions.

Proven ability to collaborate with cross-functional teams in international environments, improve testing processes, identify quality risks, and deliver reliable software across Banking, Finance, Crypto Exchange, E-commerce, HCM, CRM, and ERP domains.

TECHNICAL PROFICIENCIES

- Programming: Java, JavaScript, Python, PHP, C#
- UI Automation: Playwright, Selenium, WebdriverIO
- API Automation: Playwright API, Karate, Postman
- Test Framework: TestNG, JUnit, Cucumber, Jest
- Performance: JMeter
- CI/CD: Jenkins, GitHub Actions, TeamCity
- Test Management: Jira, TestRail, TestLink
- Database: SQL

PROFESSIONAL EXPERIENCE

Introlligent - USA

QA Engineer, June 2024 – Sep 2026

Project description

- Domain: HCM, CRM, ERP
- Team size: 8-10 members

Responsibilities

- Analyze business requirements, functional specifications, and user stories to identify potential risks, gaps, and ambiguities before implementation.
- Define test strategies, develop test plans, and establish appropriate testing approaches based on project scope, business priorities, and risk assessment.
- Design, review, and maintain comprehensive test scenarios and test cases, ensuring adequate coverage of functional and business requirements.
- Lead manual testing activities, including functional, integration, end-to-end, exploratory, regression, smoke, and sanity testing.
- Validate complex business workflows and data integrity across HCM, CRM, and ERP modules.
- Identify, investigate, document, and track defects throughout the testing lifecycle, providing clear reproduction steps, supporting evidence, and impact assessments.
- Collaborate closely with Product Owners, Business Analysts, Developers, and other stakeholders to clarify requirements, resolve issues, and ensure expected product behavior.
- Participate in defect triage meetings, prioritize issues based on business impact and severity, and follow up on resolutions.
- Evaluate test coverage, monitor testing progress, and communicate quality status, potential risks, and release readiness to stakeholders.
- Proactively identify gaps in the testing process and recommend improvements to enhance product quality and testing efficiency.

Technologies

- Collaboration tools: Radar, Slack

GFT - Germany

QA Engineer, September 2021 – May 2024

Project description

- Domain: Banking, Crypto Exchange
- Team size: 8-10 members

Responsibilities

- Develop, execute, and maintain automated test scripts using various technologies and tools
- Create detailed, comprehensive, well-structured test cases based on product requirements
- Conduct regression testing to ensure that features continue to function after updates
- Perform functional testing to verify the functionality of the software
- Collaborate closely with the development team to ensure consistent project execution

- Identify, record, document thoroughly, and track bugs
- Stay up-to-date with new testing tools and test strategies

Technologies

- Collaboration tools: Jira, Slack
- CI/CD: Github, Jenkin
- Automation frameworks/tools: Cypress, Playwright, Karate
- Programming language: Java, JavaScript

★ Confluence - USA

Automation QC, September 2020 – September 2021

Project description

- Domain: Private Fund Reporting Platform
- Team size: 8-10 members

Responsibilities

- Implement automated and manual test cases with a focus on validating complex calculations, functional scenarios, performance, scalability, and usability
- Develop and execute test plans and work with other team members to implement the plan
- Work on a cross-functional Scrum team participating in planning, stand-ups, retrospectives, and demonstrations
- Possess the ability to define and apply test methodologies/metrics to ensure that the quality guidelines for the product have been met
- Attention to detail and commitment to accuracy and quality
- Seek constant improvement of yourself, our products, our software development process, and your team's performance

Technologies

- Collaboration tools: Jira, Slack
- CI/CD: Github, Jenkin
- Automation frameworks/tools: Selenium
- Programming language: C#

★ Gforces - UK

Test Engineer, May 2019 – July 2020

Project description

- Domain: Website builder
- Team size: 8-10 members

Responsibilities

- Contribute to and drive ongoing process improvement
- Implementation of the test automation framework
- Executing exploratory testing of new features
- Requirements analysis – Ensuring testability of applications, testing understanding of requirements against clients' expectations
- Creation and execution of test cases
- Defect mitigation, management, and reporting
- Participating in Agile planning activities
- Create technical and configuration documentation
- Ensure the confidentiality, integrity, and availability of all IT business information

Technologies

- Collaboration tools: Jira, Slack
- CI/CD: GitHub, TeamCity
- Automation frameworks/tools: CodeCeption
- Programming language: PHP

★ Cybozu Vietnam – Japan

QA Engineer, May 2016 – May 2019

Project description

- Domain: Groupware
- Team size: 8-10 members

Responsibilities

- Analyzing documentation
- Preparing testing environment: Set up OS (Windows, Linux) using VMware, install the product and related services
- Designing test plans, test cases, and test reports
- Improving and extending automation testing framework (Java Selenium, WebdriverIO)
- Developing scripts that apply for testing (shell, bash)
- Executing both manual test cases and automated test cases on Android, iOS, Windows, and MAC platforms
- Review test cases
- Researching/Learning new knowledge that applies to testing (JavaScript)
- Defect tracking
- Training new members
- Supporting team members

Technologies

- Collaboration tools: Jira, Skype
- CI/CD: Github, Jenkins

- Automation frameworks/tools: Selenium, WebdriverIO
- Programming language: JavaScript

★ Outsourcing– Vietnam

Tester, September 2015 – May 2016

Project description

- Team size: 8-10 members

Responsibilities

- Analyzing the requirements of the client
- Participating in preparing test plans
- Preparing test scenarios and test cases
- Defect tracking
- Conducting review meetings within Teams

Technologies

- Collaboration tools: Jira, Skype
